SUMMARY

CSE undergrad (2027) with a strong foundation in AI/ML and software development. Delivered end-to-end projects spanning computer vision, financial NLP, and market forecasting each with measurable, production-ready outcomes. Driven to engineer scalable, intelligent systems that turn data into measurable business value. Targeting AI/ML Engineer and Software Developer roles at product-based technology companies.

TECHNICAL SKILLS

AI/ML: TensorFlow, Keras, Scikit-learn, OpenCV, CNN, Random Forest
Languages: Python, C++, Java, JavaScript, SQL
Frameworks & Tools: Streamlit, Plotly, Git, GitHub, Notion
Cloud & Databases: AWS, MySQL, PostgreSQL

PROJECTS

Financial Sentiment & Price Movement Correlation System
Jan 2026 – Mar 2026

Python · FinBERT · VADER · Streamlit · Plotly · NewsAPI

- Engineered a dual-model NLP pipeline (FinBERT + VADER) that ingested 12,000+ news articles, uncovering a 0.51 lag-based correlation between BTC sentiment scores and price returns.
- Constructed an interactive Streamlit dashboard with Plotly charts for real-time BTC and NIFTY 50 market intelligence, cutting manual analysis time by ~70%.
- Integrated cross-asset signal comparison across equities and crypto, broadening the platform scope beyond single-instrument sentiment tracking.

AI-Powered Plant Disease Detection System
Mar 2025 – May 2025

TensorFlow · Keras · OpenCV · VGG16/19 · CNN

- Trained VGG16 and VGG19 via transfer learning, achieving 89.3% and 85% validation accuracy across 38 disease classes - outperforming a baseline CNN by 4+ percentage points.
- Designed preprocessing and augmentation pipelines (rotation, flipping, normalization) that cut training time by 40% while improving generalization on real-world image data.
- Automated leaf disease classification for 38 crop conditions, delivering a computer vision solution applicable to precision agriculture at scale.

Bitcoin Volatility Forecasting Model
Nov 2024 – Jan 2025

Python · Scikit-learn · Pandas · NumPy · Random Forest

- Developed a Random Forest Regression pipeline leveraging RSI, EMA, trading volume, and price momentum - improving predictive accuracy by 18% over raw OHLCV baselines.
- Structured a reproducible ML workflow (data cleaning → feature engineering → hyperparameter tuning → evaluation) aligned with production engineering best practices.

EXPERIENCE

IT Support Intern
May 2025 – Jul 2025

Cynet Systems — Noida, UP

- Resolved 20+ hardware, software, and network tickets per sprint cycle, reducing average resolution time by 30% through systematic root-cause documentation.
- Administered 60+ user accounts and access permissions via Active Directory, maintaining zero security compliance gaps across enterprise operations.
- Authored 20+ internal SOPs for recurring incidents, decreasing repeat-issue resolution time by 25% and accelerating new-hire onboarding workflows.
- Collaborated with cross-functional IT and network teams to uphold 80%+ operational reliability across multi-department infrastructure.

EDUCATION

B.Tech – Computer Science & Engineering
Aug 2023 – Present

VIT Bhopal University | CGPA: 8.23 — Bhopal, MP

Class XII – CBSE
Mar 2022

Seth Anandram Jaipuria School | 86.2% — Ghaziabad, UP

Class X – CBSE
Mar 2020

Seth Anandram Jaipuria School | 90.8% — Ghaziabad, UP

CERTIFICATIONS

- Applied Machine Learning in Python -- University of Michigan, USA
- Cloud Computing -- IIT Kharagpur
- Python Essentials -- VIT Bhopal University
- Fundamentals of AI/ML -- VIT Bhopal University
- AWS Technical Essentials -- Amazon Web Services
